

Christopher Klein - Senior Quality Assurance Analyst and User Experience Designer

Los Angeles, CA | christopherwalterklein@gmail.com

With 13 years shipping software titles across game platforms, I build and improve operational procedures for QA teams. I lead and support by gathering data, assessing results, and constructing solutions to get a project or feature from concept to release with minimal risk. I utilize resources efficiently to ensure the products I work on are released with the high stability and high quality standards users expect.

Employment History

INTREPID STUDIOS, INC

Senior Quality Analyst | "Ashes of Creation", Systems Team | 07/01/2024 – 02/01/2026

- Designed and executed comprehensive test plans for 10+ core gameplay systems focused on mitigating critical launch risks during release cycles.
- Owned onboarding for 3 successive external QA vendor teams, designing SOPs and training programs on internal tools, features, and technical processes — reducing ramp time with each transition.
- Engineered custom Jira Dashboards to provide real-time visibility into feature progress and defect density for stakeholders, enabling leadership to make data-driven 'Go/No-Go' release decisions.
- Orchestrated large-scale playtests for 200+ concurrent players, synthesizing telemetry and feedback into actionable data for the production team.
- Optimized internal QA tools, significantly reducing scenario setup time and increasing overall test execution efficiency.

CLOUD IMPERIUM GAMES, LLC

User Experience Designer | "Star Engine", Editor Team | 01/01/2021 – 10/01/2023

- Built a UX pipeline for engine tools, translating user friction and technical issues from engineers, artists, and designers into structured findings for stakeholders.
- Using Miro and Figma, I conceptualized user journeys and refined designs through user testing.
- Collaborated with embedded QA to develop new test cases and automation coverage for the Editor.
- Reduced time-to-competency for newly hired developers through updated in-editor documentation and workflow setup guides.

Senior Quality Assurance Tester | "Star Citizen", Vehicle Team | 02/01/2018 – 12/01/2020

- Maintained databases, managed regressions, and tested the current vehicle catalog and new features for the Vehicle Team.
- Maintained documentation and provided feature updates to local and global QA teams.
- Ran local and remote playtests for new vehicles and features, gathering insights and metrics ahead of minor and major milestones.
- Developed global QA strategies for vehicle and level testing on Star Citizen's Persistent Universe, improving cross-departmental testing efficiency.
- Acted as de facto lead in manager's absence: represented the team in Lead Triage meetings and contributed to feature strategy discussions for upcoming vehicle content.
- Trained 3 new testers to full production readiness through structured performance reviews and technical workshops.
- Identified critical design issues early through embedded trust with the design team, preventing downstream technical debt and improving feel metrics.

PHOSPHOR GAMES, LLC

QA Lead | *"Jurassic World", "Batman VRSE", "Brookhaven Experiment"* | 01/01/2017 – 08/01/2017

- Directed internal testing and certification across multiple VR platforms and mobile environments (TRC, XR, iOS, Android).
- Pitched and led the studio's migration off Hansoft, replacing it with TestRail for QA and Jira for production and development — improving traceability, Perforce integration, and per-team task visibility. Onboarded the full team to the new pipeline.
- Hired and managed a 4-person QA team across 3 shipped titles, owning the full hiring, training, and professional development lifecycle.

WARGAMING.NET

Quality Assurance Tester | *"World of Tanks" (Xbox/PS4)* | 08/01/2014 – 10/01/2016

- Streamlined daily smoke testing, enabling rapid build distribution across all console platforms for the department.
- Mastered diverse game modules through rotation, ensuring high-level domain expertise and consistent player experience across the title.

PHOSPHOR GAMES, LLC

QA Tester | *"Nether", "WARP"* | 10/01/2013 – 08/01/2014

- Executed ad-hoc and regression testing in Unreal Engine 3, identifying high-priority defects within a rapid-iteration small team environment.
- Ensured production environment reliability by verifying build consistency and documenting malfunctions for immediate developer resolution.

Skills

Leadership and Mentoring

I train junior testers by assessing their previous responsibilities and work with them to produce a growth path. I established team SOP's which emphasize how and when to flag problems and who to contact. I teach testers to be critical and constructive of our department procedures as I believe active contribution environments provide spaces for trust and accountability.

Test Strategy

I obtain standards and acceptance criteria agreed upon by meeting with development and production during quarter or sprint planning sessions. From agreed upon deliverables I assess feature scale, team capacity, current tooling, and current priorities which may cause conflict. All of which is used in conjunction when maintaining databases and providing reports to stakeholders.

Development Tools

Testmo, TestRail, GitHub, Perforce, Figma, Miro, Jira, Confluence, Unreal Engine, Unity3D, Godot, Adobe Photoshop, Illustrator, XD, Jenkins, Visual Studio, Google Sheets, Docs, SurveyMonkey

Platform Releases on:

Xbox 360, Xbox One, PlayStation 4, PSVR, iOS, Android, Meta VR, various PC / Steam Releases

Education

DePaul University

Bachelor's Degree, Game Development, 2013
